

Proposed Title

THE MIDDLE HOLOCENE

This study was conducted to outline paleoenvironmental change within the Uerster River valley, Interior Alaska from the late Glacial to the middle Holocene. Specifically

this study was undertaken with regard to human-environmental interaction in the landscape.

Archaeological methods were used in order to determine the history of land use

and to determine how the human-environmental system changed through time, and

to determine the human use of the environment and resources in environmental and

historical contexts. The study was conducted in the Uerster River valley, Interior Alaska.

The study was conducted in the Uerster River valley, Interior Alaska, from the late Glacial to the middle Holocene.

The study was conducted in the Uerster River valley, Interior Alaska, from the late Glacial to the middle Holocene.

The study was conducted in the Uerster River valley, Interior Alaska, from the late Glacial to the middle Holocene.

The study was conducted in the Uerster River valley, Interior Alaska, from the late Glacial to the middle Holocene.

The study was conducted in the Uerster River valley, Interior Alaska, from the late Glacial to the middle Holocene.

The study was conducted in the Uerster River valley, Interior Alaska, from the late Glacial to the middle Holocene.

The study was conducted in the Uerster River valley, Interior Alaska, from the late Glacial to the middle Holocene.

The study was conducted in the Uerster River valley, Interior Alaska, from the late Glacial to the middle Holocene.

The study was conducted in the Uerster River valley, Interior Alaska, from the late Glacial to the middle Holocene.

The study was conducted in the Uerster River valley, Interior Alaska, from the late Glacial to the middle Holocene.

The study was conducted in the Uerster River valley, Interior Alaska, from the late Glacial to the middle Holocene.

The study was conducted in the Uerster River valley, Interior Alaska, from the late Glacial to the middle Holocene.

The study was conducted in the Uerster River valley, Interior Alaska, from the late Glacial to the middle Holocene.

The study was conducted in the Uerster River valley, Interior Alaska, from the late Glacial to the middle Holocene.

The study was conducted in the Uerster River valley, Interior Alaska, from the late Glacial to the middle Holocene.

The study was conducted in the Uerster River valley, Interior Alaska, from the late Glacial to the middle Holocene.

The study was conducted in the Uerster River valley, Interior Alaska, from the late Glacial to the middle Holocene.

The study was conducted in the Uerster River valley, Interior Alaska, from the late Glacial to the middle Holocene.

The study was conducted in the Uerster River valley, Interior Alaska, from the late Glacial to the middle Holocene.

The study was conducted in the Uerster River valley, Interior Alaska, from the late Glacial to the middle Holocene.

The study was conducted in the Uerster River valley, Interior Alaska, from the late Glacial to the middle Holocene.

The study was conducted in the Uerster River valley, Interior Alaska, from the late Glacial to the middle Holocene.

The study was conducted in the Uerster River valley, Interior Alaska, from the late Glacial to the middle Holocene.

The study was conducted in the Uerster River valley, Interior Alaska, from the late Glacial to the middle Holocene.

The study was conducted in the Uerster River valley, Interior Alaska, from the late Glacial to the middle Holocene.

The study was conducted in the Uerster River valley, Interior Alaska, from the late Glacial to the middle Holocene.

The study was conducted in the Uerster River valley, Interior Alaska, from the late Glacial to the middle Holocene.
