A horizontal bar chart at the bottom of the image displays the frequency of various colors. The x-axis represents color categories, and the y-axis represents the count of pixels. The most prominent colors are blue, green, and red, each appearing in over 10% of the pixels. Other colors like cyan, magenta, yellow, and black are present in smaller amounts.

Section 2

Figure 1. The effect of the number of hidden layers on the performance of the proposed model.
